China Residencies | www.chinaresidencies.com

- Julia Malleck (International Relations, English, 2016)
- General Intern
- Part-time, 12 hours per week
- Unpaid

What do you do as an intern at this organization?
I work on social media updates, grant and current events research, interview editing, and drafting of press releases and other documents.

How did you find your internship?
www.idealist.org

What do you enjoy most about your internship?
The best part is being able to meet new people involved in the international art scene, as well as those interested in China's current affairs. It's a really great networking opportunity.

What do you find challenging?
I've never done grant research before, or learned how to properly write an official press release, rejection letter, or acceptance letter. So, I guess there was a learning curve there.

What advice would you offer to someone who wants to make the most of an internship like yours?
I got my internship because I responded to the position opening within 24 hours of its posting. Be proactive and send in your CV, resume and cover letter ASAP. This shows your interest and gives you an edge over other applicants. For everything else, being open-minded, flexible and willing to learn is very important.

About the Organization
China Residencies
Brooklyn, NY

China Residencies believes that diplomacy shouldn’t just be left to politicians. Artists are cultural and social change makers, and we are passionate about creating opportunities for artists to bring a broader cultural understanding into their work and communities. Over 30 artist residency programs give artists time and space to create work in China, but thousands of creatives don't have a way to connect with these opportunities. The not-for-profit mission of China Residencies is to create a comprehensive directory and an online platform for visiting artists and hosting organizations; foster successful creative exchanges by strengthening the network of programs; and research organizational best practices, archival systems, and mapping exchange.
