- Jack Eidson (Economics, Environmental Studies, 2015)
- Research Analyst Intern
- Full-time, 45-50 hours per week
- Paid

What do you do as an intern at this organization?
Every day is a bit different. I’ve made slide decks for prospective clients, created and maintained excel databases of wind farms around the country, and researched industry standards which we’re using as we finalize our first hedge contracts.

How did you find your internship?
My boss from last summer introduced me to the company, since he was friends with the CEO from business school and he knew I was interested in finance and sustainability.

What do you enjoy most about your internship?
I really like the team and the fast paced environment. Since it’s an early stage fintech startup, we move very quickly between different projects. Because of that pace, a slide deck that I made in the morning might be sent out by mid-afternoon, or IEC standards I researched one week will show up in an actual contract the next.

What do you find challenging?
Being a non computer scientist in an environment when 3 of the 4 other employees are. Some meetings seem to go straight over my head.

What advice would you offer to someone who wants to make the most of an internship like yours?
If you have a good relationship with previous bosses, it’s always good to keep them posted about what you’re interested in or looking for. I wouldn’t have known about this company if I hadn’t kept in touch with my boss from last summer.

About the Organization
REsurety
Boston, MA

REsurety is an independent risk transfer intermediary dedicated to improving the profitability of wind power through efficient wind volume risk transfer. We sell a wind-based derivative that allows wind farms to hedge against the risk of not getting enough wind in their farm in a given year.
